

Log CHARA/VEGA 2016-05-27

Observateurs: Denis, Fred, Simon, Mariem & Norm

UT03:00: Start, humidity around 90%. Standby.

NOAO gam Vir on E1P1B1-E2P2B2

UT05:30: start opening. RH below 70 and stabilized. True opening at 5:50. E2 did not find the star. Many network issues. Telescopegtk, opletab, shutgtk are not running on our side. Tiptiltgtk is fine...

UT06:55: E2 is definitively lost. We close it and go to W1.

V65 kappa Dra on E1P1B1-W1P3B2-W2P5B3

UT07:00: POP3 has to be put on W1 first. And W1 has to be open. VPN connection restarted but hard to get it ON again.

UT07:34: kap Dra is locked. We align.

UT07:48: NIRO alignment has been difficult. CLIMB Search

UT08:14: fringes found on CLIMB. Major issues on sockets, sockman. Impossible to run some of the CHARA Gui and thus to cophase.

UT10:00: after many different tries, we decide to give up.
